

THE IDEA

EV + VPP

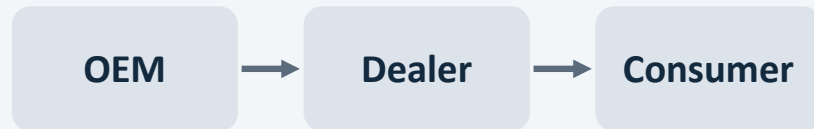

Turning EVs into distributed energy assets.

THE PROBLEM

One of the key challenges in EV adoption: upfront price + total cost of ownership

TRADITIONAL EV MODEL

Battery = Primarily a Cost

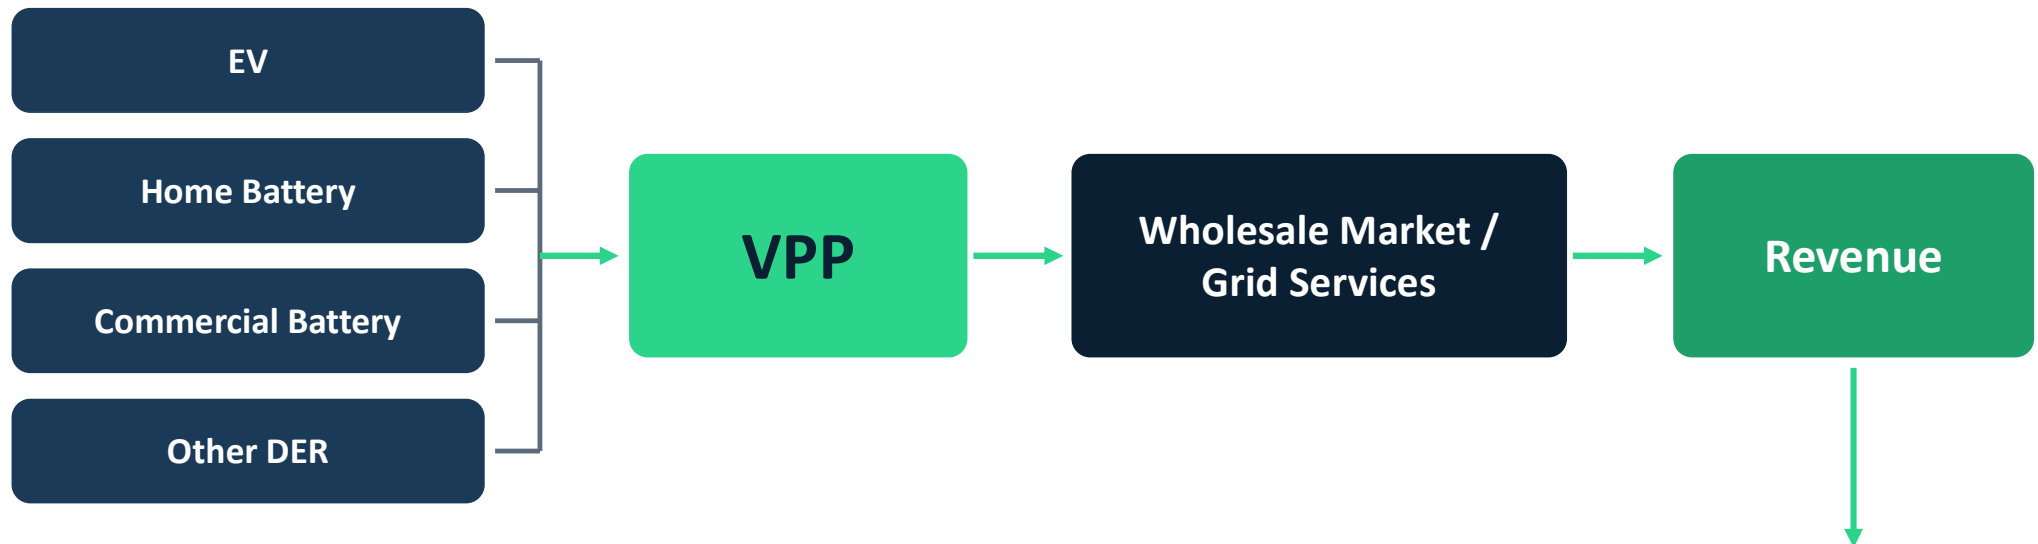

OUR MODEL

Battery = Mobility + Energy Value

THE SOLUTION

Aggregate distributed assets into one VPP and monetize them in the grid

PART OF THE ECONOMIC VALUE FUNDS

A portion of the economic value can be used to reduce the effective cost of EV ownership — creating a new economic incentive for EV adoption.

WHY US

Proven VPP technology, ready for U.S. commercialization

1

VPP technology already available

No need to build the platform from scratch

2

Australian VPP experience & technology partnership

Technology partner with real-world VPP operations

3

U.S. commercialization strategy

Market-by-market rollout, starting with ERCOT

MARKET ROLLOUT

Initial target

ERCOT

Then expand

CAISO / PJM / other markets

WHAT WE ARE LOOKING FOR

Seeking strategic partners, pilot opportunities and initial capital to launch the U.S. deployment. Our goal is to build a scalable infrastructure platform connecting electric mobility with wholesale energy markets.

Capital target

~\$3M

Initial focus

EV + VPP deployment

Target market

ERCOT

LOOKING FOR

Corporate partners

EV / charging partners

Energy partners

Strategic investors

ClimateTech investors
